

## THREAD GAUGES

**Q. *Are your stocked thread gauges supplied with calibration certificates?***

A. No. Two reasons; A calibration certificate is dated and only valid for one year, also the certificate should be issued to the user, not the supplier.

**Q. *Can you issue calibration certificates?***

A. No. We subcontract the calibration of our gauges to an independent UKAS accredited laboratory. We *can* issue a certificate of conformity which states the thread dimensions and tolerances that the gauge was manufactured to, but does not state that the gauge has been measured, or is within tolerance.

**Q. *Do you manufacture your gauges?***

A. No. We subcontract this to several manufacturers. We oversee the quality only.

**Q. *How can you achieve your low prices?***

A. We stock most gauges in quantity. This reduces manufacturing costs.

**Q. *If I purchase gauges from you can you mark them with my identification number?***

A. Yes, for a small charge. Please ask us.
