

TANGENTIAL CHASERS

Q. *What is the material specification and hardness of your chasers?*

A. M2 Tool steel (HSS), and RC63 as for all of our standard tools.

Q. *Are your chasers suitable for Landis die heads?*

A. Yes. They are dimensionally identical.

Q. *How do I decide the chaser section that I need?*

A. Refer to our technical information pages. If you cannot find the answer there contact us with details of your die head and the cross section of any old chasers that you have.

Q. *Are your chasers already ground on rake and throat angle?*

A. No, we will grind them to suit your requirements when you order. This may delay despatch slightly. Alternatively, if you have the facility you can grind them yourself.

Q. *How should I grind the chasers to suit my application?*

A. Refer to our technical information or call us.

Q. *Do you supply tangential chasers in sections other than those you list?*

A. Yes but these would need to be custom made. Please enquire.
