

COVENTRY DIE HEADS

CHS.

Good general purpose die head. Suitable for all work on manual and automatic machinery except very short threads in soft material, where a DX may be required. Can be fitted with spring band closer for use on autos or closing handle for manual use. Shank is cushioned. Suitable for majority of applications.

CH.

Shank is solid to the body so suitable only for manual use. Model maker's favourite!

DX

CHS and CH die heads open by 'pulling off' as the required thread length is reached. The DX diehead can be opened by 'pushing off' as the plunger (top of image) contacts a machine stop. This prevents damage to short threads which may be damaged by 'pull off' action. Can also be set for 'pull off' action.

DIE HEAD PRICES
